What we do

```
<SECTION>  
  <p>Building secure, useful and flawless experience</p>  
</SECTION>
```

We work among different disalines in order to achieve our client's goal in building awsome customer experience. Our services include:

1. Mobile development
2. Web development
3. UI/UX Design
4. E- Commerce
5. SEO

("Hello, World!");

- # UI/UX Design
- # Web development
- # Mobile development
- # eCommerce Solutions
- # SEO

We believe UI makes the first impression for any production while UX is proving the positive impression was very true. Understanding the product needs, sketching, mocking up and designing all the details, makes the product meet our high standards for the best user experience.

We build web apps and websites using the most trendy and powerful technologies. Following the best practices as we apply great software design which makes the product scalable, secure, and reliable as well.

We use different techniques:

- MYSQL
- PHP
- PYTHON
- VUEJS
- JQUERY
- JS
- HTML5
- CSS3

We build Native apps and Hybrid apps. Focusing in e-services, modern apps, connecting to databases and third party services like SMS, payments, etc.

We use several programming languages as:

- SWIFT
- JAVA
- KOTLIN
- IONIC
- PHONEGAP

Building e-commerce websites could seem easy for the first look. But the challenge is to create complete product with high quality, which enables customer to shop with the best & safest experience. Further more, to keep all this in reliable system that can be available anytime.

Platforms we use:

- MAGENTO
- SHOPIFY
- OPENCART

We believe that building a good product is not enough if you did not reach your customers and search engines are the most effective tools to bring customers into your website. At Osloob, we apply different techniques onsite and offsite to assure the website get very friendly with search engines.

("Hello, World!");

How we work

The project goes through a specific process:

#1

Idea & requirements

Understanding the project scope and provide the materials needed to achieve the client goals.

#2

Research & study

Matching the client needs with the market expectations to choose or create suitable practices.

#3

Design

Shaping the client's vision by the appealing design which leads the user inside the software

#4

Development

According to what suits the software needed, we inline design efficiency with software functionality.

#5

Testing

Pre-launching stage is where all the spots are tested and maintained to be convenient with the targeted user.

#6

Launch & support

After testing and making sure the software is ready, We launch it while keeping track of its performance & support any technical issues.

MwaeedTec Store

("Hello, World!");

Tafaseel

Startup online store based in Riyadh. It's an e-commerce business motivated by high-end design products. We worked at Osloob as a partner and handled the full software solution to reach, sell, and serve in best practices.

Technologies used:

- # Shopify is used as a platform
- # Dynamic landing page
- # SMS notifications
- # Zendesk integration
- # Gift sending service

```
("Hello, World!");
```

Shatri

More than 30 years in the market. Shatri has built very strong name in the field, and reached loyal customers. As our strategic vision in Osloob, we worked with them as a development partner to enable the process of selling their products online and provide powerful e-commerce solution.

The main challenge was enabling e-commerce for a legacy company, since they already have huge number of items, sales, existing customers, ERP system and multiple warehouses.

Technologies used:

- # Magento is used as a platform
- # Integrated with internal ERP system
- # SMS enabled
- # Retailer portal

("Hello, World!");

MwaeedTech

Booking appointments with the doctor you trust on the time you choose is not an easy task and it can take a lot of time and effort.

Therefore, we developed at Osloob the application of MwaeedTech. This app enables user to search and browse doctors by nearest or best rating. The user can also filter his search by insurance type that's accepted in the clinic or by payment method and confirm the booking online.

The main characters of the app:

- # Fully customized app built with Ionic & web technologies.
- # Web portal for clinics managing patients and appointments.
- # Nearby search for doctors.
- # Live Calendar.
- # SMS mobile verification.
